Phosphorus requirements

After calcium, phosphorus is the second most commonly occurring mineral in a dairy cow's body. Most of it is stored in the bones and teeth. Of all the minerals, phosphorus has the greatest number of bodily functions. It plays a role within energy metabolism, it is part of the building blocks of cell membranes and it is an important nutrient for rumen microbes. Just like calcium, phosphorus deficiencies are often seen around calving time. This can result in the animal suffering from Downer syndrome. One of the symptoms of this disorder is that the cow can no longer stand.

Topro Phosphorus bolus

The Topro Phosphorus bolus has been developed to combat phosphorus deficiency. This bolus contains 15 grams of phosphorus for immediate release. 15 grams of Calcium has been added, as a phosphorus deficiency is often paired with a calcium deficiency.

Composition

Dicalcium phosphate, monosodium phosphate, sorbitol, calcium stearate.

Storage advice

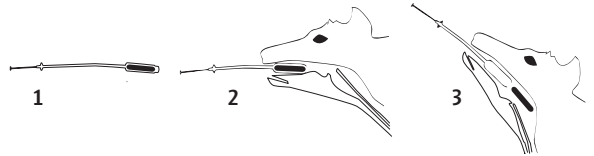

Keep product cool, dry and out of reach of children. Protect against frost.

Instructions for use

- At first signs of calving: 2 boluses
- Immediately after calving: 2 boluses

Dosage after a calcium infusion against ketosis

- 2 boluses once the cow stands up again.
- 2 boluses 10 – 12 hours later.

- Administer using an suitable bolus applicator.
- We recommend consulting a nutritionist before use.

Product characteristics

Phosphorus Quickly replenishes phosphorus deficiencies. Helps prevent Downer syndrome.

Calcium	To supplement a calcium deficiency.
Bolus	Easy to administer. Ensured absorption.
